

Cable entry and Cable holding systems

Cable entry plates for pre-assembled cables

The cable entry panel system is a split system that solves problems like introducing pre-assembled cables into enclosures, for example.

Page 10

Cable entry plates for cables without plugs

A real alternative to cable fittings. With this system cables made of plastic, aluminium or stainless steel can be installed in a flash.

Page 58

Accessories for cable entry systems/panels KDL/KDP

Under accessories you will find various blanking plates, floor sheeting, adapter plates for cut-out reduction and discharge plates for EMC applications.

Page 129

Strain relief / cable fixing plate

Strain relief options in various variations and models. To screw on, snap in or press on. In plastic or metal.

Page 145

Cable fitting

Plastic and metal cable fittings. For EMC applications and for explosive areas. Multi-inserts make the fittings even more versatile. With metric, Pg and NPT threads.

Page 173

Accessories

Lock nuts, dummy plugs, thread reducers or extenders, O-rings, angle brackets, conduit clips, spiral strips, fixing rivets, cable ties, screw-down and adhesive holders and cable tie rails.

Page 187

Tools

In this section you will find tools for a safe, streamlined electrical installation including cable stripping knife, wire stripper and cable tie tools etc.

Page 215

Punching tools

Punching tools for steel sheets and stainless steel sheets. To produce exact cut-outs. Round cut-outs for metric or Pg threads. Rectangular cut-outs or cut-outs for SUB-MIN-D plugs.

Cable entry and cable holding systems

☑ KDL – for pre-assembled cables

Our cable entry systems are designed for inserting pre-assembled cables and electrical conduits in divider walls, junction boxes, control cabinets and much more.

Example applications: interior use, driver's cabs, in control cabinet, plant or machine construction.

☑ type KDL

☑ KDP – for cables without plugs

The cable insertion panel is a routing and fastening system for cables without connectors and pneumatic hoses.

Example applications: interior use, driver's cabs, in control cabinet, plant or machine construction. Everywhere where quick, cable-protecting assembly with a high packing density is required.

☑ type KDP

☑ Accessories for cable entry systems

Blanking plate with different properties for closing non-used cut-outs. Adapter plates and floor sheeting for control cabinets from various manufacturers. Easy-to-handle EMC discharge plates for cable entry systems.

☑ Accessories

☑ ZL/KAF strain relief

Strain relief options in various variations and models. To screw on, snap in or press on. In plastic or metal. Cable ties are used to provide simple strain relief to cables of all kinds.

☑ Strain relief

For years, Murrplastik Systemtechnik GmbH has provided cable entry systems, cable entry panel systems, strain relief plates and cable holding systems.

Right from the beginning priority was given to a systematic approach. The priority has always been to design "products which provide definite application advantages to the customer".

The KDL cable entry system has been developed to make it much easier for end customers to route pre-assembled cables e.g. measurement, servo cables, computer cables and bus systems.

During the design process, considerable emphasis was given to the need for a simple and trouble free application. The KDL product range thereby serves the need for a simple and trouble free application.

The potential for strain relief and discharge of sheath currents has also been integrated into the cable fixing plate.

A further innovation is the KDP cable entry plate, which offers a real alternative to cable fittings.

The KDP boasts enormous savings potential through rapid installation. A lower footprint and user-friendly assembly are two of the major advantages that this product offers.

However, these are just some of the outstanding innovations from Murrplastik Systemtechnik GmbH. The selected materials ensure that the user is always offered a product that matches his particular application. Official approvals such as EN,

DIN, BS, NFF and UL and grades of fire protection from HB to V0, together with an IP rating appropriate for the specific application, guarantee a high degree of security and productivity.

All Murrplastik products are developed and manufactured according to the very latest criteria. Even during the development process, environmentally friendly production and the use of environmentally compatible materials are key considerations.

The products and systems undergo a wide range of tests in our own laboratory. If available, we utilise German DIN, European, or UL standards. Our engineers can, on request, create specific test criteria in collaboration with the customer. Ongoing tests ensure a high level of quality.

Our cable entry and strain relief systems are largely marketed worldwide through our own sales network.

Additional sales are handled by a qualified network of dealers. Both sales organisations have competent staff on hand to assist you.

All sales organisations have their own warehouse, enabling rapid delivery periods (just in time).

Cable entry plates for pre-assembled cables

System overview

KDL / E cable entry system

The KDL/E cable entry system represents further development of the third KDL generation. The advantage here is quicker assembly at double the capacity. Optionally, the KDL/E can additionally be snapped in.

Page 13

KDL cable entry system

The KDL cable entry system is a split system that allows pre-assembled cables to be routed into an enclosure without disassembling the connectors.

Page 23

KDL / EMC cable entry system

The KDL/EMC is the metal version of the KDL. Sheath currents of shielded cables can be simply discharged in several different ways here.

Page 39

Cable entry system KDL / S

The cable entry system type KDL/S is a special custom-prepared plate. It fits into cut-outs for 16-pole connectors.

Page 49

Accessories for cable entry systems/panels KDL / KDP

Under accessories you will find various blanking plates, floor sheeting, adapter plates for cut-out reduction and discharge plates for EMC applications.

Page 129

KDL/E cable entry system

Advantages

We go at everything head first

Even faster and simpler assembly of pre-fabricated conduits.

The KDL/E replaces the well established KDL/N model.

The single-piece frame no longer needs to be joined together.

The provided catch hooks significantly speed up mounting of the entire plate, e.g. on the control cabinet.

Vario grommets reduce the need for grommets with different diameters.

This ultimately means significantly simpler and quicker assembly in general.

- ✓ Cable insertion without interruption
- ✓ Simple mounting
- ✓ Single-piece frame
- ✓ Snap-in from 1.5 – 4.1 mm
- ✓ No need to screw on
- ✓ Strain relief
- ✓ Protection class IP 54

Overview

Material data for the entire system (cable entry systems with grommets)

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

All components of the entire grommet-configured system KDL/E conform with ROHS and are characterised by the IP class 54 (except for double cable grommets).

Additionally all components are free of halogen, phosphorous, cadmium, asbestos, lead and silicone.

The entire system can be used within

temperature range of -40°C to 80°C (transient to 100°C) and features the fire classification HB.

All system components feature an UR approval.

The cable entry systems type KDL/E are made of polyamide 6.6, the corresponding grommets care made of thermoplastic rubber.

Cable entry system, type KDL/E

-  System
-40 – 80 °C, transient 100 °C
-  Polyamide 6.6
-  V0
-  IP 54
(with suitable grommets and cables)

The KDL/E represents the 3rd generation of Murrplastik cable entry system.

- Even quicker mounting of pre-assembled cables
- Snap in, meaning screwing on is no longer absolutely necessary
- Catch hook for 1.5 – 2.0 mm plate thickness included with delivery, additional catch hooks for up to 4.1 mm plate thickness available.
- Fits standard cut-outs for connectors (e.g. Harting, Wieland and Rittal).
- Simple realization of EMC solution with discharge plate

KDL/E cable entry system

Cable entry grommets, type KDT/xE

-40 – 80 °C, transient 100 °C

Thermoplastic rubber

HB

IP 54
(with matching cables)

In conjunction with the KDL/E cable entry system, the KDT/xE cable entry grommet can be used to easily route pre-assembled cables e.g. in control cabinets. The grommet is 2-pce. and is positioned around the cable. The grommets are equipped with catch hooks that anchor themselves in the KDL/E when positioning. Strain relief for type KDT/ZE is achieved using a simple cable tie. Type KDT/VE is a vario grommet without strain relief which covers a larger clamping range.

Made in Germany	RoHS compliant
--------------------	-------------------

KDL/E cable entry system

Snap-on mounting

Lay the cable into an appropriate grommet and provide strain relief where necessary using cable ties.

Use appropriate tool to punch through cover on base frame.

Set catch hooks into the sides of the cut-out.
Mind the plate thickness.

Insert rail completely. The grommet must produce a continuous seal on the back side. Set the rail onto the catch hooks and press on.

Lock the catch hooks with the rail.
Press gently on the grommets one more time.

Screw-on mounting

Lay the cable into an appropriate grommet and provide strain relief where necessary using cable ties.

Use appropriate tool to punch through cover on base frame.

Insert rail completely. The grommet must produce a continuous seal on the back side. Fix rail with 4 screws. Do not exceed the maximum torque.

Press gently on the grommets one more time.

KDL cable entry system

Advantages

Assembling high-tech plugs securely in the control cabinet

No need to keep cutting the plug off your cable!

It is so easy to introduce pre-assembled plugs into the control cabinet. Cables with attached plugs are often high-tech products which cannot be cut without invalidating the guarantee for the system.

Thanks to the split rail and the split grommets, the cable with plug can be easily mounted in the cable entry system.

As the saying goes:
it's an open and shut case!

The KDL can quickly and simply insert up to 30 conduits the control cabinet.

- ✓ Cable insertion without interruption
- ✓ Simple mounting
- ✓ Strain relief
- ✓ Protection class IP 54
- ✓ High packing density
- ✓ Cable & plug manufacturer's system guarantee remains valid

Overview

Cable entry system KDL (KDL 16, KDL 24, KDL 2/10, KDL 3/15)

The KDL is a cable entry system for inserting pre-assembled cables. Suitable for cut-outs for 16-pole and 24-pole Harting and Wieland connectors.

Page 28

Cable entry connector housing, type KD/SG

The KD/SG connector housing can be adapted using the mounting enclosure from Harting or Wieland. Mounting and/or unmounting is simple and requires no tools.

Page 29

Cable entry mounting enclosure, type KD/AG

The mounting enclosure is able to accommodate the split connector housing which allows you to easily introduce pre-assembled cables into the control cabinet.

Page 30

Cable entry grommets, type KDT/Z (standard)

The cable entry grommet KDT/Z allows the fitting of cables from 3 – 29 mm in size in the cable entry system KDL.

Page 31

Cable entry grommets, type KDT/Z-L (paint spraying sector)

The grommet was specially conceived for use in the paint spraying sector. The material contains no wet paint impairment substances.

Page 33

Cable entry grommets, type KDT/Z-V0 (fire classification V0)

These cable entry grommets are self-extinguishing (V0) based on UL 94. With this, cables of 3–29 mm can be fitted into the cable entry system KDL.

Material data for the entire system (cable entry systems with grommets)

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

All components of the entire grommet-configured system KDL conform with ROHS and are characterised by the IP class 54 (except for double cable grommets).

Additionally all components are free of halogen, phosphorous, cadmium, asbestos, lead and silicone.

The entire system can be used within temperature range of -40°C to 80°C (transient 100°C)

The cable entry systems type KDL are made of polyamide 6.6, the corresponding grommets are made of thermoplastic rubber.

Assembly

Lay cable into appropriate grommet and provide strain relief where necessary using cable ties.

Where required, install small sleeves into the adapter grommet.

Insert rail completely. Fill in empty spaces with dummy grommets.

Join upper and lower part of bar. Fasten rail with the side screws.

Position rail on the cut-out and fasten.

KDL / EMC cable entry system

Advantages

Discharge sheath currents

The KDL/EMC is a cable entry system made of plastic with a metallised surface.

This plate can be used as a trouble-free way to discharge sheath currents from electro-magnetic shielding.

The KDT/Z-EMC cable entry grommet uses a fitted metal braiding to achieve the connection between the conduit shielding and the cable entry system.

An alternative opportunity to discharge sheath currents comes through an additional discharge plate that can be mounted onto the existing drilling pattern.

- ✓ Simple mounting
- ✓ Large cut-out
- ✓ Variable
- ✓ No additional parts required
- ✓ No extra mounting effort required

Overview

KDL / EMC cable entry system (KDL 16/x, KDL 24/x, KDL 2/10, KDL 3/15)

The KDL / EMC is the metal version of the KDL. Sheath currents of shielded cables can be simply discharged in several different ways here.

Page 44

Cable entry grommets, type KDT/Z-EMC

The cable entry grommet is a grommet adapted to the sheath diameter with a conductive textile tape to discharge interferences to the control cabinet.

Page 45

Configuration and mounting of the cable entry system KDL / EMC

Page 47

KDL / EMC cable entry system

Selection table (possible combinations of cable entry grommets and systems)

The cable entry system KDL/EMC is based on the cable entry system KDL. A conductive surface allows cable sheath interference to be discharged onto the control cabinet simply and without additional aids. Field-related interferences are discharged by the metallisation. Fits cut-outs for 16-pole and 24-pole connectors.

compliance

Configuration and mounting of the cable entry system KDL / EMC

Strip wire at the insertion point and lay into grommet (suitable for diameter at the shielding braid).

Use a cable tie for strain relief where necessary.

Where required, install small sleeves into the adapter grommet.

Insert rail completely. Fill in empty spaces with dummy grommets.

Join upper and lower part of bar. Fasten rail with the side screws.

Position rail on the cut-out and fasten. Ensure good contact between rail and control cabinet panel.

Cable entry system KDL/S

Advantages

Cable entry if desired

The KDL/S is a cable entry system for which grommets can be manufactured to meet the customer's specifications.

The cut-out size for the cable entry system corresponds to the cut-out for 16-pole connectors.

Various conduit entries can be created, e.g. multi-inserts, custom shapes or different combinations.

- ✓ Individual solution
- ✓ Simple mounting
- ✓ Large cut-out

Overview

Cable entry system KDL / S

The KDL/S is a cable entry system for which grommets can be manufactured to meet the customer's specifications. It fits into cut-outs for 16-pole connectors.

Page 55

Cable entry grommets, type KDT/S

The cable entry grommets type KDT/S can be manufactured to meet the customer's specifications. For example for entering specially shaped cables.

Page 56

Cable entry system KDL / S

Selection table (cable entry grommets KDT/S for cable entry system KDL / S)

The cable entry system type KDL/S is a custom cable entry system that allows various kinds of cables to be inserted to meet the customer's requirements and then for the opening to be closed off. The internal KDT/S grommet can be custom designed based on the customer's requirements. Fits standard cut-outs for 16-pole connectors (e.g. Harting, Wieland and Rittal).

Material data for the entire system (cable entry systems with grommets)

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

All components of the entire grommet-configured system KDL/S conform with ROHS and are characterised by at least fire classification HB.

Additionally all components are free of halogen, phosphorous, cadmium, asbestos, lead and silicone. The entire system can be used within temperature range of -40°C to 80°C (transient to 100°C).

The cable entry systems type KDL/S are made of polyamide 6.6 and are approved for use on German and French railways. The corresponding grommets are made of thermoplastic rubber.

Applications

Cable entry system, type KDL / S

System

-40 – 80 °C, transient 100 °C

Polyamide 6.6

V0

The cable entry system type KDL/S is a custom plate that allows various kinds of cables to be inserted to meet the customer's desires and then for the opening to be closed off. The internal KDT/S grommet can be custom designed based on the customer's requirements.

- Fits standard cut-outs for 16-pole connectors (e.g. Harting, Wieland and Rittal).

Cable entry plates for cables without plugs

Overview

Cable entry plate KDP plastic, rectangular

The rectangular cable entry plate type KDP 24 for cut-outs with 24-pole connectors is a real alternative to cable fitting.

Page 61

Cable entry plate KDP plastic, round

The round cable entry plate type KDP/R for direct assembly in housing cut-outs is a real alternative to cable fitting.

Page 79

Cable entry plate KDP metal, rectangular

The metal KDP is another version of the KDP series. The stainless steel version is particularly suitable for application in the food and chemical areas.

Page 87

Cable entry plate KDP/BG-FB plastic bus enclosure

Complete bus enclosure with integrated cable entry plate, pre-installed top hat rail and transparent cover.

Page 117

Cable entry plate KDP/BG plastic Rose enclosure

The cable entry plates type KDP/BG have been specially developed for Rose enclosures. Extremely quick and easy assembly.

Page 123

Accessories for cable entry systems/ panels KDL/KDP

Under accessories you will find various blanking plates, adapter plates for cut-out reduction and discharge plates for EMC applications.

Page 129

Cable entry plate KDP plastic rectangular

Cable entry plate KDP plastic rectangular

Advantages

**Straight in!
22 cables
installed
in approx.
2 minutes**

10 times faster and with a simultaneous space saving of up to 50 % compared with conventional cable fittings.

Take advantage of these huge potential savings. The plastic KDP/N 24 is simply clicked into the cut-outs for 24-pole connectors and the cable is then pushed through – and the cable insertion is already done!

The cable entry plate is an entry and fastening system for electric conduits and pneumatic hoses such as those used in control cabinet, plant or machine construction. Wherever quick assembly, cable-protecting and high packing density are required, the cable insertion system is used.

- ✓ Enormous time savings during assembly
- ✓ Extremely low space requirement
- ✓ High packing density
- ✓ Assembly without tools
- ✓ High protection class
- ✓ No kinks in cables and tubes

Overview

Cable entry plate KDP/N 24

The square cable entry plates KDP/N 24 are a second generation extension of the square cable entry plate KDP 24. The advantage lies in the simple assembly with fastening by means of catch hooks.

Page 68

Cable entry plate KDP 24-Multi

The cable entry plates, type KDP 24-Multi are a combination of our KDP system and our cable entry strips KDL/E. They take up to four pre-assembled cables in two grommets.

Page 70

-----------------	----------------

Cable entry plate KDP plastic, rectangular

Mounting KDP/N Snap-on mounting

Create cut out (112 x 36 mm) for the KDP/N 24/x as shown in the illustration. Insert cable insertion plate and press on until it clicks into place.

Where necessary, remove the optional black cover from the locking plate. To do so, press the opening through from the rear until the cover falls out.

Select an opening appropriate for the cable diameter and push the cable through the opening from the front. The indicator becomes visible on the rear of the KDP/N 24/x. Pull cable through to desired length.

Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Position optional label plate (type KSS...) and click in. The clamping range for the openings (e.g. 4x5.0 – 9.2) are visible on the front of the insertion plate.

Mounting KDP/N Screw-on mounting

Create cut out (112 x 36 mm) and mounting holes for the KDP/N 24/x as shown in the illustration. Press through the membrane on the mounting holes on the cable entry plate. Set plate onto the cut-out and screw down.

Where necessary, remove the optional black cover from the locking plate. To do so, press the opening through from the rear until the cover falls out.

Select an opening appropriate for the cable diameter and push the cable through the opening from the front. The indicator becomes visible on the rear of the KDP/N 24/x. Pull cable through to desired length.

Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Position optional label plate (type KSS...) and click in. The clamping range for the openings (e.g. 4x5.0 – 9.2) are visible on the front of the insertion plate.

Cable entry plate KDP plastic, rectangular

Mounting KDP-Multi snap-on mounting

Create a cut-out (112 x 36 mm) for the cable entry plate. Set catch hooks into the sides of the cut-out.

Lay cable into an appropriate grommet and provide strain relief where necessary using cable ties.

Use appropriate tool to punch through cover on base frame.

Select a sleeve suitable for the diameter of the cable and place the cable in the sleeve. Make sure there is enough cable length. Close grommets if necessary pull through the cable with a strain-relief cable tie to the desired length. Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Select an opening appropriate for the cable diameter and push the cable through the opening from the front. The indicator becomes visible on the rear side. Pull cable through to desired length. Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Mounting KDP-Multi snap-on mounting

Push the cable entry plate over the set catch and lock in place.

Lock the set catch and press down the cable entry plate again at the edges.

Cable entry plate KDP plastic, rectangular

Mounting KDP-Multi screw-on mounting

Create a cut-out and drill holes (112 x 36 mm) for the cable entry plate.

Lay cable into appropriate grommet and provide strain relief where necessary using cable ties.

Use appropriate tool to punch through cover on base frame.

Select a sleeve suitable for the diameter of the cable and place the cable in the sleeve. Make sure there is enough cable length. Close the sleeve and if necessary relieve strain on the cable using a cable tie. Position the sleeve in the cable entry system.

Select an opening appropriate for the cable diameter and push the cable through the opening from the front. The indicator becomes visible on the rear side. Pull cable through to desired length. Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Mounting KDP-Multi screw-on mounting

Position and affix the cable entry plate above the cut-out.

Press down the cable entry system at the edges again.

Cable entry plate KDP plastic round

Cable entry plate KDP plastic round

Advantages

Straight in! Now also for round cut-outs

Install electric cable and pneumatic hoses with minimal effort, saving time and money.

The KDP cable entry system is ideal if space is at a premium. Simply snap-in the KDP/R or screw in with a locking nut.

Push cable through in a few seconds. That's all there is to it!

The round version of the cable entry plates allows for work with round cut-outs.

The principle is identical to our tried-and-tested KDP/N 24 (rectangular).

Custom solutions with other hole patterns are available by request.

- ✓ Enormous time savings during assembly
- ✓ High packing density hence minimal space requirements
- ✓ Assembly without tools
- ✓ High protection class IP 65
- ✓ Protects the hoses & cables
- ✓ Can simply be locked in

Snap-on mounting

Create circular cut-out dimensioned for the KDP/R. Insert cable insertion plate and press on until it clicks into place.

Where necessary, remove the optional black cover from the locking plate. To do so, press the opening through from the rear until the cover falls out.

Select an opening appropriate for the cable diameter and push the cable through the opening from the front. The indicator becomes visible on the rear of the KDP/R. Pull cable through to desired length.

Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Cable entry plate KDP Plastic/round

Screw-on mounting

Create circular cut-out dimensioned for the KDP/R. Place cable insertion plate and press on. Fasten KDP/R with lock nut.

Where necessary, remove the optional black cover from the locking plate. To do so, press the opening through from the rear until the cover falls out.

Select an opening appropriate for the cable diameter and push the cable through the opening from the front. The indicator becomes visible on the rear of the KDP/R. Pull cable through to desired length.

Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Cable entry plate KDP Metal

Cable entry plate, type KDP metal rectangular

Advantages

Fits in even confined spaces

The metal cable entry plate is, like the plastic version, an ideal alternative to cable fittings.

Cables and hoses can be installed in seconds, even in highly confined spaces.

Aluminium and stainless steel versions offer a broad range of applications.

Stainless steel version particularly suited for foodstuffs and chemical industries.

Quick installation of up to 292 services even while saving up to 50% of space thereby reducing costs as well.

- ✓ High packing density
- ✓ Quick installation
- ✓ High IP protection class
- ✓ Low installation height
- ✓ Fits in Rittal enclosure

Overview

Cable entry plate metal KDP 90 (90x90 mm)

The KDP metal cable entry plates with external dimensions 90x90mm can be mounted in cut-outs with \varnothing 75 mm.

Page 101

Cable entry plate metal KDP 90 (90x144 mm)

The KDP metal cable entry plates with external dimensions 90x144 mm can be mounted in cut-outs measuring 71x109 mm.

Page 102

Cable entry plate metal KDP 90 (90x221 mm)

The KDP metal cable entry plates with external dimensions 90x221 mm can be mounted in cut-outs measuring 62x192 mm.

Page 103

Cable entry plate metal KDP 90+3 (90x221 mm)

The KDP metal cable entry plates with external dimensions 90x221 mm can be mounted in cut-outs measuring 62x192 mm. Additionally, up to three pre-assembled cables can be inserted.

Page 104

Page 114

Cable entry plate, type KDP metal rectangular

Selection table KDP 90 (possible combinations of cable entries)

The KDP metal with installation height 90 mm is one of the many products from the KDP metal range. It can be fitted directly, or using adapter plates, into prefabricated housing cut-outs.

The technical advantage here is linked to the enormous time savings with cable assembly. IP class 65 is achieved without additional time or material.

The cable entry plates from the KDP metal enable tool-free introduction of actuators, sensors, measuring and control instrumentation, optoelectronics, pneumatic lines and drive technology e.g. into a control housing.

Number of openings on the cable entry plate corresponds to cable diameter

Ø mm 3.0–5.0	Ø mm 3.0–6.0	Ø mm 3.0–6.2	Ø mm 3.5–6.5	Ø mm 4.0–8.0	Ø mm 4.5–8.5	Ø mm 6.0–10.0	Ø mm 6.0+8.5

Material data for all KDP metal

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

All types of KDP metal comply with ROHS and feature the high IP class 65. Additionally all components are free of halogen, phosphorous, cadmium, asbestos, lead and silicone. KDP metal also have CSA approval.

It can be used within a temperature range of -30 to 90 °C. Aluminium designs, recognisable by the additional type ALU, are

made of high quality AlMg3 (3.3535). Stainless steel designs, recognisable by the additional type V4A, are made of stainless steel of quality category V4A (1.4571).

The sealant on all KDP metal type is made of NBR/EPDM.

The cable entry plates from the KDP metal enable tool-free introduction of actuators, sensors, measuring and control instrumentation, optoelectronics, pneumatic lines and drive technology e.g. into a control panel.
The stainless steel version is particularly suitable for application in the food and chemical industries. Integrated threaded bolts mean that no screws are visible from outside.

Cable entry plate KDP Metal

Mounting screw-on mounting type KDP x/x ALU

Set cable entry plate onto the cut-out and screw down.

Where necessary, remove the optional black cover from the locking plate. To do so, press the opening through from the rear until the cover falls out.

Select an opening appropriate for the cable diameter and push the cable through the opening from the front. The indicator becomes visible on the rear side. Pull cable through to desired length.

Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Mounting screw-on mounting type KDP x/x V4A

Set cable entry plate onto the cut-out and screw down from the rear.

Where necessary, remove the optional black cover from the locking plate. To do so, press the opening through from the rear until the cover falls out.

Select an opening appropriate for the cable diameter and push the cable through the opening from the front. The indicator becomes visible on the rear side. Pull cable through to desired length.

Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Cable entry plate KDP/BG-FB plastic bus enclosure

Cable entry plate KDP/BG-FB plastic bus enclosure

Advantages

All inclusive

This fully integrated enclosure has everything you'll need.

Self-extinguishing enclosure with integrated cable entry system and pre-mounted top hat rail.

Ideal for installation of bus terminal block.

Indicator lights remain visible from outside even when cover is closed. This enables disruptions to be recognised quickly.

- ✓ Fully integrated enclosure
- ✓ Integrated cable entry plate
- ✓ Integrated top hat rail
- ✓ High protection class
- ✓ Transparent cover
- ✓ Quick installation

Overview

Cable entry plate KDP plastic bus enclosure

Bus enclosure with integrated cable entry plate. Ideal for applications with WAGO or Beckhoff I/O clamps. With an integrated top hat rail and cable entry plate.

Page 121

Assembly and configuration of the KDP plastic bus enclosure

Detailed configuration and assembly instructions on cable entry plates and bus enclosures.

Page 122

Cable entry plate KDP/BG-FB plastic bus enclosure

Selection table KDP/BG-FB (possible combinations of cable entries)

The cable entry plate KDP plastic bus enclosure is a complete bus enclosure with an integrated cable entry plate, preinstalled support bar TS 35x15 (EN 50022-35) and transparent cover.
The bus enclosure is supplied ready for installation, thereby effectively reducing costs. Ideal for applications with WAGO, Murrelektronik or Beckhoff I/O modules. Indicator lights remain visible even when cover is closed. Protection class IP 65.

Number of openings on the cable entry plate corresponds to cable diameter

Ø mm 3.0–5.0	Ø mm 3.0–6.2	Ø mm 4.0–8.0	Ø mm 7.0–11.5	Ethernet RJ45

BG-FB KDP 70
Item no. 87663008

Material data for the cable entry plate plastic bus enclosure

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

The type BG-FB KDP 70 complies with ROHS and features IP class 65. It is also free of halogen, phosphorous, cadmium, asbestos, lead and silicone.

It can be used within a temperature range of -30 to 90 °C.

The cable entry plate plastic bus enclosure is inspected according to fire protection V0. It is made of polycarbonate and the sealant is made of NBR/EPDM.

RoHS
compliant

- Transparent cover Indicator lights remain visible even when cover is closed
- High protection class IP65
- Integrated cable entry system
- Premounted mounting plate with support bar TS 35x15 (EN 50022-35)

Cable entry plate KDP/BG-FB plastic bus enclosure

Configuration and mounting of cable entry plate KDP/BG-FB

Release cover seals and lift housing cover.

Where necessary, remove the optional black cover from the locking plate. To do so, press the opening through from the rear until the cover falls out.

Select an opening appropriate for the cable diameter and push the cable through the opening from the front. The indicator becomes visible on the rear side. Pull cable through to desired length.

Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Following successful installation of all elements, replace cover on top and latch down.

Cable entry plate KDP plastic for Rose enclosure

Cable entry plate KDP plastic, Rose enclosure

Advantages

Straight in! Even in Rose enclosure!

Install electric cable and pneumatic conduits with minimal effort, saving time and money.

The KDP cable entry system is ideal if space is at a premium.

The cable entry plate KDP-BG for Rose enclosure can be fixed directly onto the housing with the two supplied flange wedges.

The pre-fabricated cut-outs are easy to insert individually, even without tools.

The principle is absolutely identical to our tried-and-true plastic KDP/N 24 (rectangular).

- ✓ Assembly without tools
- ✓ Huge time savings
- ✓ Cost reductions
- ✓ High protection class
- ✓ Variable
- ✓ Designed for Rose enclosure

Overview

Cable entry plate KDP type rose

Cable entry plate for installation in Rose polyester flange housing PG14. Very quick, tool-free mounting with 2 flange wedges.

Material data for the plastic cable entry plate Rose enclosure

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

The plastic cable entry plate Rose enclosure complies with ROHS and features IP class 65.

It is also free of halogen, phosphorous, cadmium, asbestos, lead and silicone.

It can be used within a temperature range of -30 to 90 °C.

The cable entry plate plastic Rose enclosure is inspected according to fire protection V0.

It is made of GFK polyester and the sealant is made of NBR/EPDM.

RoHS
compliant

- Tool-free assembly
- High protection class IP65
- Flange wedges (2 pieces) included with delivery
- Suited for electric and pneumatic installations
- Casing not included with delivery

Cable entry plate KDP Rose enclosure, plastic

Configuration and mounting of cable entry plate KDP/BG Rose

Set cable entry plate into the enclosure.

Press on the cable entry plate and press the flange wedges in until stopping point.

Where necessary, remove the optional black cover from the locking plate. To do so, press the opening through from the rear until the cover falls out. Select an opening appropriate for the cable diameter and push the cable through the opening from the front. The indicator becomes visible on the rear side. Pull cable through to desired length.

Insertion of a cable with a RJ45 plug is only possible at one position. Push cable with plug through the entry from the front. The indicator becomes visible on the rear side. Pull cable through to desired length.

Retract cable approx. 10 – 15 mm until the indicator on the rear is no longer visible. Depending on cable diameter and insertion size, the indicator may well become visible on the front side again.

Accessories for cable entry systems and plates

Accessories for cable entry systems and cable entry plates

Advantages

**If it doesn't fit
it will be made
to fit.**

To make the large range of Murplastik cable entry systems compatible for use in various control cabinets and housings made by different manufacturers, we keep a large selection of adapters on hand.

For example the control cabinet floor plate type SBB enables direct installation of our cable entry systems KDL/E into TS8 Rittal control cabinets.

Do you want combine various sizes of cable entry plates or insert both round and square components at the same time? Then you're in the right place!

- ✓ Blanking and adapter plates for standard cut-outs
- ✓ Numerous versions
- ✓ Simple mounting
- ✓ For cable entry systems made of plastic and metal
- ✓ For EMC applications

Overview

Control cabinet floor sheeting, type SBB

The control cabinet floor sheeting can be installed in Rittal (type TS8) control cabinets. Delivery includes locking plates type VP24.

Page 137

Blanking plate plastic, type BP

The BP blanking plates are suited for sealing non-used cut-outs for 16- or 24-pole connectors.

Page 138

Discharge plate, type KDL-AB and KDL/N-AB

The KDL and KDL/E discharge plates are suited for discharging interference which may occur on cable sheaths.

Page 139

Blanking plate type BP xx ALU/V4A (metal design)

Blanking plate for closing off unused adapter positions and cut-outs. The stainless steel version is particularly suitable for application in the food and chemical areas.

Page 140

Adapter plate Rittal

The Rittal adapter plates can be directly mounted into the prefabricated cut-outs from Rittal casings. They serve to retain various Murrplastik cable entry systems.

Page 141

Adapter plate Sarel

Adapter plate can be fitted directly into the standard cut-outs of Sarel cabinets. They serve to retain various Murrplastik cable entry systems.

Page 142

Adapter plate Lohmeier

The Lohmeier adapter plates can be directly mounted into the prefabricated cut-outs from Lohmeier casings. They serve to retain various Murrplastik cable entry systems.

Page 143

Adapter plate Ensto

The Ensto adapter plates can be directly mounted into the prefabricated cut-outs from Ensto casings. They serve to retain various Murrplastik cable entry systems.

Page 144

Accessories for cable entry systems and cable entry plates

Material data type SBB (control cabinet sheet flooring)

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

The control cabinet floor sheeting type SBB is made of galvanised sheet steel. The included locking plates type VP are made of polyamide 6.6, conform with ROHS and are free of halogen, phosphorous, cadmium, asbestos, lead and silicone. If the control cabinet, floor sheeting and locking plates are installed correctly IP class 54 is achieved.

The control cabinet floor sheeting type SBB can be used in a temperature range of -40 to 125 °C (transient to 140 °C) and is inspected according to fire classification V0.

Material data type BP and BP/N (Blanking plate plastic design)

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

The blanking plates types BP and BP/N comply with ROHS. The type BP/N features the higher protection class IP 65, type BP features protection class IP 54. Additionally all components are free of halogen, phosphorous, cadmium, asbestos, lead and silicone. They can be used within a temperature

range of -40 to 125 °C (transient 140 °C). The blanking plates are inspected according to fire classification V0. They are made of polyamide 6.6, the sealant is made of NBR. UR approvals as well as approvals for the German and French railways exist.

Material data type BP/H (Blanking plate plastic designs)

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

The blanking plate type BP/H complies with ROHS and features protection class IP 42. Additionally this type is free of halogen, phosphorous, cadmium, asbestos, lead and silicone. The blanking plate can be used within a temperature range of -40 to 60 °C.

An inspection according to fire classification HB exists. It is made of TPE and features UR approval.

Material data type BP (Metal), KDL/AB, KDL/N-AB, AP/xx (Adapter plates, metal)

RoHS Compliant

V4A/ALU/NBR

The named types comply with ROHS. Aluminium designs (additional type ALU) made of high quality AlMg3 (3.3535). Stainless steel versions (additional type

V4A) made of stainless steel of the quality category V4A (1.4571). Supplied sealants are made of NBR.

[illegible]

Discharge plate, type KDL-AB and KDL/N-AB

Stainless steel 1.4310

The KDL and KDL/E discharge plates are suited for discharging interference which may occur on cable sheaths.

The discharge plate should be installed on the inside of the control cabinet, directly at the fixing points of the KDL or KDL/E cable entry system.

KDL/AB...

[illegible]

RoHS
compliant

Blanking plate for closing off unused adapter positions and cut-outs.
The stainless steel version is particularly suitable for application in the food and chemical areas. Integrated threaded bolts mean that no screws are visible from outside.
Mounting set included in delivery.

140

Adapter plate Rittal

RoHS
compliant

Stainless steel V2A (1.4301)
and V4A (1.4571)

The Rittal adapter plates can be directly mounted into the prefabricated cut-outs from Rittal casings. They serve to retain various Murrplastik cable entry systems. Unused adapter spaces can be closed off using blanking plates. A blade terminal L6.3 is available for earthing the adapter plate. Adapter plate without sealing. The seal is part of the cabinet accessories.

RoHS
compliance

Adapter plate can be fitted directly into the standard cut-outs of Sarel cabinets. They serve to retain various Murrplastik cable entry systems. Unused adapter positions can be closed off using blanking plates of type BP. A blade terminal L6.3 is available for earthing the adapter plate. Adapter plate without sealing. The seal is part of the cabinet accessories.

KDP 24/AP/SA/2+0

142

Adapter plate Lohmeier

Stainless steel 1.4301
(V2A)

The Lohmeier adapter plates can be directly mounted into the prefabricated cut-outs from Lohmeier casings. They serve to retain various Murrplastik cable entry systems. Unused adapter spaces can be closed off using blanking plates. A blade terminal L6.3 is available for earthing the adapter plate. Adapter plate comes with seal included.

[illegible]

Strain relief cable fixing plate

Overview strain relief plates

Strain relief, type ZL-fix

The strain relief ZL-fix may be used wherever cables, cords, wires or conduits must be relieved or routed in a way that is secure, easy and cost-effective.

Page 151

Strain relief, type ZL

Guaranteed strain relief easily and affordably. The insertion of the ELB bush stops the cold extrusion characteristic of plastic from affecting the secure fixing of the plate. The DH spacer sleeve is needed for two-tier mounting.

Page 152

Strain relief, type ZL-AH / ZL-MH

The strain relief plates ZL-AH and ZL-MH are based on the ZL strain relief plate. By inserting the aluminium or brass grommets the ZL strain relief plate is free of fastening forces.

Page 153

Strain relief, type ZL-AM / ZL-SW / ZL-C

The embedded brass discs hinder the screwed connection from loosening by itself under heavy vibrations. Assembly on C-rails with slot nuts/screws.

Page 154

Strain relief, type ZL-MF

The strain relief plate ZL-MF is based on the strain relief plate ZL. The preassembled feet enable simple, tool-free assembly on a 35mm top hat rail (EN 50022).

Page 156

Strain relief, type ZLF

The type ZLF is based on the strain relief plate ZL. The fastening clips that are used allow for simply mounting on c-rails with 10 mm slot and a plate thickness of max 2.0 mm.

Page 157

Strain relief, type ZL xx-AB

In conjunction with the ZL strain relief rail, the ZL-AB discharge plate is suitable for discharging interferences which may occur on cable sheaths.

Page 158

Strain relief accessories

The DH spacer sleeve is required for stacking the ZL strain relief plate. The insert bushing ELB prevents cold flow of the plastic at the fixing point during heavy strain or permanent movement.

Overview cable fixing plates

Cable fixing plate, type KAF

The cable fixing plate KAF is suitable for simultaneously holding and relieving the strain of cables in the control cabinet. The plate may be fixed on to a 35 mm standard top hat or C-rail.

Page 160

Cable fixing plate, type KAF/NI

The cable fixing plate KAF is suitable for simultaneously holding and relieving the strain of cables in the control cabinet. Mounted using Niedax model 2910 C-rail. Securing via pre-mounted lock screw.

Page 161

Cable fixing plate, type KAF/K

The cable fixing plate KAF/K-EMC consists of a plastic carrier with a fitted V2A discharge plate. Quick and safe fastening, both on the top hat or C-rail due to integrated clamping bases.

Page 162

Cable fixing plate, type KAF/EK

The cable fixing plate KAF/K-EMC consists of a V2A (1.4301) plate for the direct discharge of any interference on the cable sheaths. The ground contact is provided through a special screw stand for the 35 mm hat rail (EN50022).

Page 163

Cable fixing plate, type KAF/SF

The cable fixing plate KAF/SF is suitable for discharging interferences which may occur on cable sheaths. The ground contact is provided through a special screw stand for the 35 mm hat rail (EN50022).

Page 164

Cable fixing plate, type KAF/DC

The cable fixing plate KAF/DC is suitable for discharging interferences which may occur on cable sheaths. The version DC is only suitable for direct installation on a conductive background.

Page 165

Cable tie rail, type KBL

Quick and easy fitting of cables. Cable ties may be pushed on if a rail is already fitted.

Page 166

Shielding clamp, type SK

The shielding clamp may be used where the shield of individual cables must be connected with the earth potential. Assembly using screws or mounting foot.

Page 167

Strain relief cable fixing plate

Advantages

Quick and reliable strain relief

Strain relief, organisation and attachment of services – quickly, simply, safely.

A large selection of strain relief plates covers a variety of potential uses.

Various types are available for screw on, snapping in or sliding in.

Whether in plastic or metal versions, or as EMC solutions. Anything is possible.

The services are simply affixed to the strain relief using standard cable ties.

- ✓ Simple
- ✓ Cost-effective
- ✓ Wide variety of types
- ✓ Quick assembly
- ✓ High tensile forces
- ✓ EMC variants

RoHS
compliance

The strain relief ZL-fix may be used wherever cables, cords, wires or conduits must be relieved or routed in a way that is secure, easy and cost-effective. The strain relief ZL-fix is available in two versions, either for direct screw fastening (flat-head screw M5, not included in delivery) or for fastening on a profile with 10 mm groove width (integrated nut strap).

- Do not constrict sensitive cables such as fibre optic cables or pneumatic hoses
- Tool-less Velcro(R) fastening can be opened and closed infinitely
- Easy handling
- Variable installation position

Strain relief Cable fixing plate

Strain relief, type ZL-AM / ZL-SW / ZL-C

Made in
Germany

-40 – 125 °C, transient 140 °C

Polyamide 6.6

VO

The strain relief plates ZL-AM, ZL-SW and ZL-C are based on the ZL strain relief plate. The embedded brass discs hinder the cold flow deformation properties of the plastic under heavy and permanent vibration, thereby preventing the screwed connection from loosening by itself. Slot nuts and screws enable simple assembly on C-rails.

- Very quick assembly
- Orderly routing of the cable
- Simple and effective strain relief through cable ties

Strain relief Cable fixing plate

Strain relief, type ZL xx-AB

Stainless steel 1.4301

In conjunction with the ZL strain relief rail, the ZL-AB discharge plate is suitable for discharging interferences which may occur on cable sheaths.
ZL strain relief not included in delivery. Please order separately.

The corresponding ZL strain relief plate is required for the discharge plate.

Strain relief accessories

Brass

The DH spacer sleeve is required for stacking the ZL strain relief plate. This allows for cables to be stacked, thereby saving space.

The ELB insert bushing can be laid into the strain relief plate type ZL. It prevents cold flow of the plastic at the fixing point during heavy strain or permanent movement.

Made in Germany **RoHS**
compliance

The cable fixing plate KAF is suitable for simultaneously holding and relieving the strain of cables in the control cabinet. Mounting is performed on a 35 mm top hat rail (EN 50022; Niedax 2934;2936) or on a C-rail (Niedax 2970;2971). The Installation becomes a simple snap-in process.

KAF...

**Made in
Germany**

The cable fixing plate KAF is suitable for simultaneously holding and relieving the strain of cables in the control cabinet. Mounted using Niedax model 2910 C-rail. Installation is a simple snap-in process. Additional securing through lock screw.

KAF/NI

[illegible]

Cable fixing plate, type KAF/K

-40 – 125 °C, transient 140 °C

The cable fixing plate KAF/K-EMC consists of a plastic carrier with a fitted V2A discharge plate. Integrated clamps ensure quick and safe fastening, both on the top hat- or C-rail. The ground contact occurs through the lateral brackets. The use of two connecting points ensures a good discharge.

KAF/K...

**Made in
Germany**

- Fits on 35 mm top hat rail (EN50022)

[illegible]

**Made in
Germany**

The cable fixing plate KAF/SF is suitable for discharging interferences which may occur on cable sheaths. The ground contact is provided through a special snap-on stand for the 35 mm hat rail (EN50022). Stripping the cable in the area of the KAF/SF and clamping in the KAF/SF achieves a contact to the KAF/SF. The snap-on clip of the KAF/SF produces a low-resistance ground contact. The use of two connecting points ensures a good discharge regardless of the position of the cable on the KAF/SF.

- Fits on 35 mm top hat rail (EN50022)
- Simply snapped on

KAF/SF...

Made in Germany RoHS compliant

Quick and easy fitting of cables.
Cable ties may be pushed on if a rail is already fitted.

KBL...

[illegible]

RoHS
compliant

The shielding clamp may be used where the shield of individual cables must be connected with earth potential. The SK can be either screwed down on the mounting plate or snapped on to the 35 mm top hat rail (EN 50022) by means of a mounting foot. SK mounting foot not included in delivery. Please order separately.

[illegible]

Mounting (ZL; ZL-AH; ZL-MH; ZL-AM; ZL-SW; ZLF)

Mounting strain relief type ZL: Set plate onto level surface and affix with suitable mounting material.

Mounting strain relief type ZL-AH or ZL-MH: Set plate onto level surface and affix with suitable mounting material.

Mounting strain relief type ZL-AM or ZL-SW: Set plate into suitable rail. Turn slot nut into rail using fastening screw. Ensure proper positioning of the slot nut. Screw down the fastening screw until the plate is clamped.

Mounting strain relief type ZLF: Set plate into suitable rail. Screw down the fastening screw until the plate is clamped.

Wire mounting on ZL, ZL-AH, ZL-MH, ZL-AM, ZL-SW and ZLF: Lay cables perpendicular to plate and affix on both sides with cable ties. For larger cable diameters, secure the cable through at least 2 retainers.

Mounting (ZL xx-AB; doubled; KAF)

Mounting strain relief, type ZL xx-AB: Set plate with attached discharge plate onto level surface and affix with suitable mounting material. Ensure good contact.

Cable mounting on ZL xx-AB: Lay stripped cables perpendicular to plate and affix on both sides with cable ties. For larger cable diameters, secure the cable through at least 2 retainers.

Strain relief for 2-tier installation: Provide metal inserts for upper and lower ZL. Install DH spacing sleeve between the plates. Affix with a suitable mounting material.

Mounting strain relief type KAF on top hat rail: Set plate lengthwise to the rail. Press plate into the side opposite it until it clicks into the rail.

Mounting strain relief type KAF on C-rail: Set plate lengthwise on the lower side of the rail. Press plate into the side opposite it until it clicks into the rail.

Mounting (KAF; KAF/NI; KAF/K; KAF/EK)

Mounting strain relief type KAF/NI on Nidax C-rail: Set plate lengthwise to the rail and press in. Affix with the lock screw.

Cable mounting on the KAF or KAF/NI: Lay cables perpendicular to plate and affix on both sides with cable ties. For larger cable diameters, secure the cable through at least 2 retainers.

Mounting strain relief type KAF/K: Set plate lengthwise to the rail. Press plate into the side opposite it until it clicks into the rail. Place the discharge plate. Affix with a suitable mounting material. Ensure good contact.

Cable mounting onto KAF/K: Lay stripped cables perpendicular to plate and affix on both sides with cable ties. For larger cable diameters, secure the cable through at least 2 retainers.

Mounting strain relief type KAF/EK: Set plate lengthwise atop the rail. Screw down the fastening screw until the plate is clamped.

Mounting (KAF/SF; KAF/DC; SK)

Mounting strain relief type KAF/SF: Set snap-on foot into the top hat rail and press down until the foot clicks in.

Mounting strain relief type KAF/DC: Position plate using spacer sleeves on the flat space and affix with a suitable mounting material.

Cable mounting on KAF/EK, KAF/SF or KAF/DC: Lay stripped cables perpendicular to plate and affix on both sides with cable ties. For larger cable diameters, secure the cable through at least 2 retainers.

Mounting shielding clamp SK: Mount shielding clamp with the fastening screw or set the snap-on foot into the top hat rail and press down until the foot clicks in. Ensure good contact.

Cable mounting for the SK shielding clamp: Press down on pressure plate and insert stripped cable. Release pressure plate and check contact.

Cable fitting

Advantages

Tried-and-true

Traditional cable fittings are required in all installations.

Known for excellent strain relief even while providing higher protection class.

They are available in a wide variety of models, such as plastic or metal.

Other types are available for EMC applications or in areas at risk of explosion.

Multi-inserts add more capacity.

- ✓ High protection class
- ✓ Good strain relief
- ✓ Simple mounting
- ✓ Wide variety of types

Overview cable fittings

Plastic cable fitting, type WKK

The cable fitting WKK offers excellent strain relief and has a vibration-resistant cap nut. Can be combined with the multi-insert KV-ME.

Page 177

Plastic cable fitting, type WKK-Ex

Cable fitting with high protection class for areas at risk of explosion. The cable fitting offers excellent strain relief and has a vibration-resistant cap nut.

Page 180

Metal cable fitting, type WKM

The cable fitting WKM offers excellent strain relief and has a vibration-resistant cap nut. Can be combined with the multi-insert KV-ME.

Page 181

Metal cable fitting with a multi-insert, type MWKM

The MWKM is a metal cable fitting with multi-insert that enables several cables to be routed through one cable fitting.

Page 183

Metal cable fitting, type WKM-EMC

Shielded cables can be connected to earth potential using this cable fitting. The cable's braiding makes contact with the metal body.

Page 184

Multi-insert, type KV-ME

The multi-insert type KV-ME can be used in the cable fittings WKK and WKM. This enables several cables to be routed through one fitting.

Page 185

Material data for all fittings /multi-inserts

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

All components in our fittings range are free of halogen, phosphorous, cadmium, asbestos, lead and silicone. The range also complies with the RoHS guidelines. The IP class entered can be increased with a few fittings and an additional O-ring.

Material data for all individual components (fittings, multi-inserts)

O-ring type OR-NBR for protection rating IP 68, see "Accessories" chapter								

Plastic cable fitting, type WKK-Ex

-20 – 105 °C

Polyamide
Moulded seal: NBR

V0

IP 54, with additional O-ring type OR
IP 68 up to 10 bar

Ex-Klasse EEx e II PTB
Ex-Klasse EEx e II KEMA

Cable fitting with high protection class for areas at risk of explosion.

The cable fitting offers excellent strain relief and has a vibration-resistant cap nut.

- Very high protection class
- Approved for areas at risk of explosion
- Large clamping range

An additional O-ring (type OR) is required in order to reach a protection rating of IP68.

WKK-EX

180

Metal cable fitting, type WKM

RoHS
compliant

-40 – 100 °C transient 120 °C

Brass, nickel-plated; Polyamide; NBR

IP 68 up to 10 bar

The cable fitting offers excellent strain relief and has a vibration-resistant cap nut. The multi-insert KV-ME enables several cables to be routed through one cable fitting.

- Very high protection class
- Easy to assemble
- Large clamping range
- Includes sealing ring on connecting thread

RoHS
compliant

RoHS
compliant

- Simple contacting
- Large clamping range
- Easy handling
- Includes sealing ring on connecting thread

**WKM-EMC**184

Multi-insert, type KV-ME

RoHS
compliant

-40 – 100 °C, transient 120 °C

Elastomer

IP 65

The KV-ME multi-insert can be used both in WKK cable fittings and in WKM cable fittings. This enables several cables to be routed through one fitting. The fitted seal insert in the cable fitting is simply swapped for the KV-ME multi-insert.

The cable diameter may be up to 20 % less than the diameter of the hole, but must not undershoot the hole diameter by less than 1 mm.

- Variable
- More cables through one fitting
- High protection class

Accessories

Overview accessories (Part 1)

Type KGM (plastic lock nut)

Plastic lock nut made from self-extinguishing polyamide with metric or Pg thread.

Page 193

Type GM (metal lock nut)

Lock nut made of metal with metric or Pg thread.

Page 195

Type BSTK (plastic dummy plug)

Dummy plug made of plastic with metric or Pg thread. IP 65 protection rating is achieved using additional O-ring type OR. (O-ring not included in delivery).

Page 196

Type BST (metal dummy plug)

Dummy plug made of metal with metric or Pg thread. IP 65 protection rating is achieved using additional O-ring type OR. (O-ring not included in delivery)

Page 197

Type KRR (plastic reducing bush)

Thread reducing bush made of plastic with metric or Pg thread. O-ring not included in delivery.

Page 198

Type RR (metal reducing bush)

Thread reducing bush made of metal with metric or Pg thread. Knurled or hexagon version, depending on type.

Page 200

Type ER/EG (metal extension)

Thread extension made of metal with metric or Pg thread. Round or hexagon version, depending on type. Some with O-ring on external thread.

Page 202

Type OR-NBR (O-ring)

O-ring for sealing threaded connections resulting in higher protection ratings, e.g. on cable fittings.

Page 204

Angle bracket, type BWM

Universal holder for fastening fittings to equipment and machinery.

Page 205

Material data for the accessories programme (Part 1)

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

All items on the opposite page are free of halogen, phosphorous, cadmium, asbestos, lead and silicone. The range also complies with the RoHS guidelines. The IP class entered can be increased with a few items and an additional O-ring.

Material data for the individual components (Part 1)

Overview accessories (Part 2)

Conduit clamp, type SS

Conduit clamps for easy attachment of conduits from our conduit product range.

Page 206

Conduit clamp, type SSG

Metal conduit clamp with halogen-free elastomer coating.

Page 207

Spiral tape, type SB/SBF

Spiral tapes are used to bundle cable harnesses efficiently and simply. Bundling in the range from 2 – 100 mm is possible with just three sizes. The SBF consists of flame-retardant material.

Page 208

Fixing rivets, type BN Assembly tool, type BNW

Plastic expansion rivets for the quick installation of components, e.g. cable ducts. Assembly tool BNW is optimally adjusted to the fixing rivets.

Page 209

Cable tie, type KB / KBM / KKB

Cable ties are a reliable method for the economic bundling and fastening of cables, cable harnesses, tubes, conduits and other components.

Page 210

Cable tie, type BF

Cable tie with title block. For use with ink pens or permanent waterproof markers. BF20 title block lengthways along cable, BF45 title block across cable.

Page 212

Screwed holder, type SH

The SH screw-down holder is used to fix individual cables cost-effectively. It can be screwed or riveted to any surface.

Page 213

Type KH (screwed and adhesive holders)

Adhesive holder, plastic. The retention force can be increased by additional fastening with a screw.

Page 214

Material data for the accessories programme (Part 2)

Halogen-free

Phosphorous-free

Cadmium-free

Asbestos-free

Lead-free

Silicone-free

All items on the opposite page are free of halogen, phosphorous, cadmium, asbestos, lead and silicone. The range also complies with the RoHS guidelines.

The IP class entered can be increased with a few items and an additional O-ring.

Advantages

You won't get far without accessories

A comprehensive range of accessories is available, including lock nuts, reducing bushes, various fasteners, cable ties and much more.

Different materials, thread types and thread sizes ensure a wide range of uses for many applications.

- ✓ Large range of accessories
- ✓ Different materials
- ✓ Various thread types and thread sizes
- ✓ Universal
- ✓ Easy handling

* with O-ring on external thread									

Type OR-NBR (O-ring)

-25 – 120 °C

NBR

O-ring for sealing threaded connections resulting in higher protection ratings, e.g. on cable fittings.

For thread type:

- Metric
- Pg
- NPT

OR-NBR

[illegible]

RoHS
compliant

- Quick and easy fastening
- For Pg and metric fittings
- Fittings secured with lock nut

[illegible]

Conduit clamp, type SS

Conduit clamps for easy attachment of conduits from our conduit product range

SS...

[illegible]

RoHS
compliant

Metal conduit clamp with halogen-free elastomer coating

- Quick and easy assembly
- For all cable protection conduits

SSG

Up to SSG 48

From SSG 70

Spiral tape, type SB/SBF

-60 – 85 °C

SB: Polyethylene

SBF: Non-inflammable polyethylene

V0 only type SBF

Spiral tapes are used to bundle cable harnesses efficiently and simply. The spiral tapes also protect the insulation of the wires. Branches of single wires or looms of cables may be made at any place. Bundling in the range from 2 – 100 mm is possible with just three sizes. The SBF consists of flame-retardant material.

Fixing rivets, type BN / Assembly tool, type BN

-60 – 80 °C

Rivet: Hostalene
Tools: Steel

Plastic expansion rivets for the quick installation of components, e.g. cable ducts.
Assembly tool BNW is optimally adjusted to the fixing rivets. Only this tool brings out the full economical effect of the BN fixing rivet.

BN...

BNW tool...

[illegible]

Cable tie, type KB / KBM / KKB

natural colours: -25 – 85 °C
black: -40 – 105 °C

KB: Polyamide 6.6
KBM: Stainless steel 1.4301

KB black: V2
KKB: V2

Cable ties in black are
UV stabilised

Cable ties are a reliable method for the economic bundling and fastening of cables, cable harnesses, tubes, conduits and other components.

The black cable ties are suitable for outdoor applications.

The cable tie KKB 28 is equipped with a special locking mechanism and is especially suitable for heavy-duty applications.

The KBM metal cable tie is ideally used for EMC solutions. It creates greater contact surface area for discharging sheath currents.

Tools

Advantages

They make your life easier

Tools that you need for your workshop and production halls.

To make work easier and increase productivity and quality.

You'll find cable stripping tools, cable shears and cable stripping knives. Plus tensioning gun for plastic and metal cable ties.

- ✓ Makes work easier
- ✓ Increased quality
- ✓ Increased productivity

Overview tools

Cable shears type KS / Cable stripping knife, type KM / Stripping tool, type UAZ

Sturdy cable shears KS1. Special cable stripping knife KM for stripping of wiring. Stripping tongs UAZ for single wires up to a diameter of 2.5 mm².

Page 218

Crimping Tool type CB2

Electromagnetic tool for crimping insulated cable end sleeves.

Page 219

Cable tie tool, types KBW / KKBW / KBW/M

Cable tie tools KBM and KKBW for mounting of plastic cable ties. Cable tie tool KBW/M adjusted to metal cable ties, type KBM.

Page 220

Sturdy cable shears KS1. Suitable for removing cable sheathing and braided shields.
EW-PAP cable protection conduit with metal braiding can be processed with these shears.
Special cable stripping knife KM for stripping of wiring.
Stripping tongs UAZ for single wires up to a diameter of 2.5 mm². A slider is used to adjust the stripping length. The stripping tongs posses an integrated cutting mechanism.

**UAZ**

Crimping Tool, type CB2

Plastic / Steel

Electromagnetic tool for crimping insulated cable end sleeves complete with accessories.

- The CrimmBoss CB2 crimping process is only activated by mechanical contactors when the cable end sleeves have been completely and correctly inserted.
- Contact tongue, small, for diameter range 0.14 – 1.0 mm²
- Contact tongue, small, for diameter range 0.5 – 2.5 mm²
- Contact tongues included with order

CrimmBoss CB2

Contact tongue

[illegible]

Cable tie tool KBM and KKBW for mounting of plastic cable ties.

- Cable tie tool KBW/ adjusted to metal cable ties, type KBM.

With manual cutting mechanism.

-

**KBW/M**

Punching tools

Advantages

Now there are exact cut-outs

For years, Murrplastik Systemtechnik has been developing easy-to-assemble, maintenance-free connection systems for the routing of services and cable.

Thanks to our practical punching tools, you now have the option of quickly and easily realising the appropriate control cabinet cut-outs for our conduit and cable fittings, cable entry panels (KDP) and cable entry systems (KDL).

You can choose between three different hydraulic punches and a wide range of punching tools.

Punching tools are available for sheet steel and for stainless steel applications.

- ✓ Compact design
- ✓ For workshop and assembly
- ✓ Long service life
- ✓ Easy handling
- ✓ Precise cut-outs
- ✓ Compatible with many other systems

Overview punching tools

Hydraulic manual punch, types SW-HG / SW-HW

Practical manual punch without additional conduit and cylinder, ideal for workshop and assembly. SW-HW version: With 306° pivoting angled head.

Page 224

Hydraulic punch with foot pump, type SW-HF

Practical hydraulic punch with foot pump; ideal for use in the workshop. The foot pump does not require use of the hands, leaving both hands free for exact positioning and punching.

Page 225

Punching tools, types SW-WR / SW-WQ

Several punching tools for the creation of square or rectangular cut-outs. These hole punches are delivered a plastic transport case.

Page 226

Punching tool type SW-WE

Round hole punch, individual tools for steel or stainless steel plates. Versions for punching holes in metric or Pg threaded connections.

Page 228

Punching tool type SW-WS

Round hole perforator tool sets from M16 to M40 and/or to M63. For steel or stainless steel plates. These hole punches are delivered in a practical plastic transport case. Also ideal for assembly work.

Page 230

Punching tool type SW-WD

Punching tools for creation of SUB-MIN-D connector cut-outs (9 to 50 poles) for connecting to data transfer cables. Corresponding tension bolt is included in the delivery.

Page 231

Punching tool type SW-ASN

Universal punching tool for creation of various cut-out sizes and shapes. Tools with hole punch width 15 mm and 20 mm.

Page 232

Spare part list for punching tools

Replacement parts for the entire punching tool system.

Page 233

Working instructions: Punching cut-outs

Correctly carried out steps for the use of the punching tool for creating cut-outs.

Page 234

Hydraulic manual punch, types SW-HG / SW-HW

Practical manual punch without additional conduit and cylinder, ideal for workshop and assembly.

- Hydraulic punch made of high-strength aluminium
- Overload protection via overpressure valve
- Ergonomic handle, springs back automatically

SW-HW version:

The angle head can be pivoted 360° for better handling.

SW-HG

SW-HW

Type	Order no.	Weight kg	Punching force kN	Operating pressure bar	Pack qty.
Compact hydraulic manual punch, straight					
SW-HG hydraulic manual punch	87801010	1.6	75.0	650.0	1
Compact hydraulic manual punch with pivoting head					
SW-HW hydraulic manual angle punch	87801012	1.9	75.0	650.0	1
Consisting of:					
1 pce. compact hydraulic manual punch					
1 each tension bolt version A					
1 pce. tension bolt version A					
1 pce. spacer bushing set (3-parts)					
1 pce. tap drill 11.0 mm					
1 pce. transport case					
Punching performance, round hole perforator:					
2.0 mm sheet steel (St37) max. Ø 84 mm					
3.0 mm sheet steel (St37) max. Ø 64 mm					
2.0 mm stainless steel (V2A) max. Ø 84 mm					
Punching performance, square hole perforator:					
2.0 mm sheet steel (St37) max. 36 x 112 mm					
Spare part see chapter "spare part for punching tool"					

Hydraulic punch with foot pump, type SW-HF

Practical hydraulic punch with foot pump; ideal for use in the workshop.
The foot pump does not require use of the hands, leaving both hands free for exact positioning and punching at the control cabinet. The support frame of the foot pump is splayed. This provides for stable, anti-tip working.

- Overload protection via installed pump safety valve
- Better punching performance then with a manual punch
- For larger punching tools

SW-HF

Type	Order no.	Weight kg	Punching force kN	Operating pressure bar	Pack qty.
Hydraulic punch with foot pump					
SW-HF Hydraulic punch with foot pump	87801014	13.9	100.0	700.0	1
Consisting of:					
1 pce. hydraulic cylinder with quick coupling					
1 pce. hydraulic conduit 2.8 m					
1 each tension bolt version A					
1 pce. tension bolt version A					
1 pce. spacer bushing set (5-parts)					
1 pce. tap drill 11.0 mm					
1 pce. sheet steel transport case					
Punching performance, round hole perforator:					
2.0 mm sheet steel (St37) max. Ø 150 mm					
3.0 mm sheet steel (St37) max. Ø 100 mm					
2.0 mm stainless steel (V2A) max. Ø 100 mm					
Punching performance, square hole perforator:					
2.0 mm sheet steel (St37) max. 138 x 138 mm					
2.0 mm stainless steel (V2A) max. 92 x 92 mm					
Spare part see chapter "spare part for punching tool"					

Punching tools type SW-WR / SW-WQ

Steel

Several punching tools for the creation of square or rectangular cut-outs. These hole punches are delivered in a plastic transport case. Also ideal for mounting use. Corresponding tension bolt is included in the delivery. During the punching process, the attachment points for the screw holes are centred.

Assembly

Establish and mark cut-outs.

Caution:

Ensure sufficient distance between the press cuts!

Mark drilling point for the pilot hole for the tension screw and punch out the pilot hole for the tension screw.

Screw in corresponding tension screw into the tool head and close the valve on the punching tool. Push on appropriate spacer and die.

Insert tension screw into pilot hole. Stick or screw stamp onto tension bolt. Secure with lock nut where needed. Align die and draw in lock nut by hand.

Activate hydraulic mechanism until the press cut is completed. Then actuate 3 – 4 further strokes. This ensures an easier removal of the plate from the die.

Caution: If excessive force is required, inspect the hydraulic tool and punching tool! Observe the tool's operating instructions.

Remove hydraulic tool from the cut-out. Open valve and remove lock nut and stamp. Remove plate from the die.

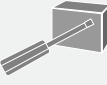

Appendix

Protection classes EN 60529

An important element for housings is protection of integrated elements against drilling, foreign particles and water. The various protection properties are divided into IP classes (IP = international protection). The framework conditions that a protection class must guarantee are laid out in DIN 40050 and IEC-EN 60529.

IP protection classes are indicated through a two digit code (IPXX). The first digit indicates protection against contact and foreign particles, the second the water protection factor. Accordingly the class IP 65 is completely protected against contacts, dustproof (1st digit = 6) and is protected against jets of water from a nozzle in all directions (2nd digit = 5).

First index number	Contact protection	Foreign particle protection	Second index number	Brief description	Water protection
0	No protection		0	No protection	
1	Protected against solid foreign objects of 50 mm and larger	The object probe, a sphere of 50 mm in diameter, must not fully penetrate. 	1	Protected against vertical falling drops of water	Drops which fall vertically must not have any harmful effect. 
2	Protected against solid foreign substances of 12.5 mm dia. and above.	The object probe, a sphere of 12.5 mm in diameter, must not fully penetrate. 	2	Protected against diagonally falling (up to 15°) drops of water	Drops which fall vertically must not have any harmful effects if the housing is inclined at an angle of up to 15° at either side of the perpendicular. 
3	Protected against solid foreign substances of 2.5 mm dia. and above.	The object probe of diameter 2.5 mm must not penetrate at all. 	3	Protected against diagonally falling spray (up to 60°)	Water which is sprayed at an angle of up to 60° from either side of the perpendicular must not have any harmful effects. 
4	Protected against solid foreign substances of 1.0 mm dia. and above.	The object probe of diameter 1.0 mm must not penetrate at all. 	4	Protected against spray from all directions	Water splashing against the enclosure from one direction shall have no harmful effect. 
5	Dustproof	The ingress of dust is not fully prevented; however, it must not penetrate to such an extent that satisfactory operation or safety are impaired. 	5	Protected against jets of water (nozzle)	Water which is sprayed in a jet against the housing from any direction must not have any harmful effects. 
6	dust-tight	No ingress of dust. 	6	Protected against strong water jets (flooding)	Water projected in powerful jets from any direction against the housing shall have no harmful effects. 
			7	Protected against the effect of temporary immersion in water	Water must not penetrate to an extent that will cause harmful effects if the housing is temporarily submerged in water under pressure and under time conditions. 
			8	Protected against the effect of temporary submersion in water	Water must not penetrate to such an extent that it will cause harmful effects if the housing is permanently submerged in water. 
			9k	Protection against highly pressurised water/steam jet cleaning	IP x9K according to DIN 40050 Water jet at 0°, 30°, 60° and 90° Cycle: 30 seconds each Distance: 10 - 15 cm Water volume: 14 - 16 litres per min. Water temperature: 80 °C +/- 5 °C Water pressure: 80 - 100 bar 

Protective classes NEMA

In the US, protective classes are not organised by IP class, but rather according to the NEMA standard (National Electrical Manufacturers Association). The following table serves for conversion of NEMA classes into the corresponding IP class. This table may not be used to convert IP classes into NEMA classes, however!

Appendix II

Fire classification / Guidelines

Description of fire classifications according to UL 94

Fire classification HB

The material burns slowly in the horizontal combustion test. The rate of combustion must not exceed 3 inches/min. for wall thicknesses of up to 3 mm, and 1.5 inches/min. for wall thicknesses over 3 mm. Any materials exceeding these combustion rate limits are not registered by UL.

Fire classification V2

In the vertical combustion test, self-extinguishing must occur after an average of 25 seconds (individual values not to exceed 30 seconds). Any dripping material may ignite cotton wool located underneath. However, any afterglow must not exceed 60 seconds.

Fire classification V1

In the vertical combustion test, self-extinguishing must also occur after an average of 25 seconds (individual values not to exceed 30 seconds). However, any possible dripping material must not ignite the cotton wool. Any afterglow must not exceed 30 seconds.

Fire classification V0

In the vertical combustion test, self-extinguishing must occur after an average of less than 5 seconds (individual values not to exceed 10 seconds). Any material dropping off must not ignite cotton wool placed underneath and any afterglow must not exceed 30 seconds.

Description of fire classification according to DIN 5510

Combustion class S4

Test procedure: acc. to DIN 54837

Requirements:

- Length of the destroyed area: ≤ 20 cm
- No afterburning

Products may also be assigned to combustion class S4 if afterburning occurs within the burnt testing area and the average duration of afterburning does not exceed 10 seconds. If afterburning occurs in the undamaged area of the test piece, the product must not be assigned to combustion class S4.

If the afterburning of a test object lasts longer 120 seconds, such products must not be assigned to combustion class S4 (note: according to DIN 5 4 837, a burning test piece must be extinguished immediately after an observation period of 120 seconds).

Guidelines

What's meant by these abbreviations?

The use of specific materials in automobiles as well as electric and electronic devices is restricted and/or forbidden by various European guidelines. Various associations

and fabricators have published their own lists of materials considered undesirable.

RoHS-Directive 2002/95/EG

(RoHS = Restriction of the use of certain Hazardous Substances in electrical and electronic equipment)

The guidelines limiting specific hazardous materials in electric and electronic devices categorised the following materials and their compounds as dangerous:

lead, mercury, cadmium, chrome 6, polybrominated biphenyl (PBB) and polybrominated diphenyl ether (PBDE).

VDA lists (VDA = Verband der Automobilindustrie in Deutschland)

Alongside the legal stipulations, there are also a variety of material and declaration lists prescribed by various associations and fabricators. They contain materials and material groups that are undesirable or forbidden from the corresponding processing branch for a variety of reasons. Several of the most well-known lists are shown in the following, their content drawn from other sources and in some cases expanded: VDA list 232-101 for notifiable materials; Bosch Standard N 2580.

The VDA list is part of the ILRS list ("List for materials in automobile manufacture requiring declaration-substances in components and raw materials") that is used in the IMDS (International Material Data System).

Directive 2000/53/EC (RoHS)

(ELV = End-of-Life vehicles)

The heavy metals listed in the ordinance (ELV) are a portion of those named in the RoHS guidelines, including lead, mercury, cadmium, chrome 6.

WEEE guidelines 2002/96/EG

(WEEE = Waste from Electric and Electronic Equipment)

Goal of the guidelines is the avoidance of waste from electric and electronic devices, as well as their recovery and recycling. They require selective handling of used devices with specific critical materials, as named in the guideline appendices.

General information

Materials

The use and combination of widely varied materials like plastics of all types, elastomers or metals means that Murrplastik products can be used in a variety of situations.

Chemical Properties

Reactions with chemical substances differ according to the individual plastics and elastomers.

For more information, see "Chemical Resistance" in "Appendix IV".

A large database with more than 1600 substances can be accessed on the internet at www.murrplastik.de.

To help you make better comparisons!

Fire behaviour

Self-extinguishing materials and material alloys allow for the use of plastics in critical areas.

The products or the raw material are normally certified and classified according to UL 94 or DIN 5510. See also "Fire Classifications" in "Appendix II".

Temperatures specifications

The temperature ranges quoted for the individual products must be noted in application.

"Short Periods" refers to a total duration of up to 500 hours. Thereafter, the properties of the plastics may change.

Approvals

Our products boast a large number of approvals and certifications, e.g. VDE, UL/UR, CSA, DB, SNCF, BS,... Note the specifications in the catalogue and product data sheets.

IP protection class

The IP protection class indicates the tightness of products against solids and water.

The values are also related to static applications. With dynamic applications, the protection class may change.

For more information, see "Protection Classes" in "Appendix I".

Reagent	Concentration %	At + °C	Polyethylene PE	Polyamide PA6	Polyamide PA 12	Polypropylene PP	Polyurethane PU

Acetone	100	20	+	+	+	+	-
Allyl alcohol	96	20		30 % o	o	+	-
Alum, aqueous	diluted	40			+	+	
Aluminium chloride, aqueous	diluted	40	+		+	+	+
Aluminium sulphate, aqueous	diluted	40	+			+	+
Ammonia, aqueous	any	20	+	20 % +		+	o
Ammonium chloride, aqueous	any	60	+		o	+	+
Ammonium nitrate, aqueous	diluted	40	+			+	+
Ammonium sulphate, aqueous	diluted	40	+			+	+
Aniline chlorohydrate, aqueous	saturated	20					
Aniline, pure	100	20	+	o	o	+	-
Benzaldehyde, aqueous	0,3	20	-	pure o	o	+	
Benzine	100	20	-	+	+	o	+
Benzoic acid	any	40	+		o	+	+
Benzol	100	20	-	+	+	o	-
Bleaching lye	12.5 Cl	20		-	o	o	
Boracic acid, aqueous	diluted	40	+	o	+	+	-
Borax, aqueous	diluted	40		o	+	+	
Boron	50	40		o			
Bromine, liquid	100	20	-	-	o	-	-
Butane diol	10	20		pure +		+	o
Butanol	100	20				+	+
Butyl acetate	100	20				o	-
Butyl alcohol	100	20	-			+	o
Calcium chloride, aqueous	any	40	+	+	o	+	+
Calcium nitrate, aqueous	50	40	+			+	+
Carbon bisulphide	100	20	-	o	+	+	+
Carbon dioxide	100	60	+			+	+
Carbon oxide	100	60	+			+	+
Carbon tetrachloride	100	20		+	o	o	+
Caustic potash solution	50	20		50 % +		+	o
Chlorine	any	20	-	-	-	-	-
Chromic alum, aqueous	diluted	40				+	
Citric acid	10	40	+			+	o
Copper chloride, aqueous	saturated	20	+			+	+
Copper sulphate, aqueous	any	40	+			+	+
Cresol, aqueous	90	20	-	pure -	-	+	-
Crystallisable acetic acid	100	20			o	+	
Cyclohexanol	100	20		+		+	-
Ethyl acrylate/acrylic resin enamel	100	20	-	30 % -	-		
Ethyl alcohol, aqueous	10	20		o		+	+
Ethyl ether	100	20		30 % +		o	-
Ethylene chloride	100	20				o	-
Ethylene oxide, liquid	100	20					
Exhaust gases containing carbon dioxide	any	60				+	+
Exhaust gases containing carbon oxide	any	60				+	+
Fluorine	50	40		-			
Formaldehyde, aqueous	diluted	40	+	pure +	o	+	o
Formic acid, aqueous	100	20		10 % o	-	+	-

The information provided above enables an initial choice to be made. However, it is not intended as a guarantee of particular properties of the products or their suitability for a particular application. It does not release the buyer from the duty of carrying out suitability checks.

+ means: resistant
o means: limited resistance
- means: not resistant

All details given in our sales material and catalogues as well as the information available online are based on our current knowledge of the products described.

The electronic data and files made available by Murrplastik, particularly CAD files are based on our current knowledge of the product described.

A legally binding assurance of certain properties or the suitability for a certain purpose can not be determined from this information.

All information with respect to the chemical and physical properties of Murrplastik products as well as application advice given verbally, in writing or by tests, is given to the best of our knowledge.

This does not free the purchaser of carrying out their own inspections and tests in order to determine the suitability of a product for a specific purpose.

Murrplastik accepts no responsibility for the available information being up-to-date, correct or complete. Neither do we accept responsibility for the quality of this information.

Murrplastik accepts no liability for damage caused as a result of using our products.

Murrplastik reserves the right to make technical changes and improvements through constant further development of products and services.

Our General Terms and Conditions apply.
